

IOT SOLUTIONS WORLD CONGRESS

Barcelona · September 16 -18, 2015

In recent years we have witnessed an explosion in the application of mobile technologies in devices other than just mobile phones. This has enabled us to interact with and control many appliances both in our personal lives, in areas such as home automation, health and private transport, and in our professional surroundings and in business through, for example, the adoption by part of the Tech industry of Industry 4.0.

This new technological revolution, known as the Internet of Things, will mean a significant shake-up for the industrial sector yet meanwhile bring progress and improvements to the life of people at large. For the first time, Catalonia and Barcelona will echo the potential offered by this sector through the IoT Solutions World Congress. The fact Barcelona is hosting this first World Congress is no coincidence. In a traditionally industrial environment, our country boasts leading companies in significant industrial sectors, as well as research institutes and technology centres that develop cutting-edge technology and have an outstanding potential for international development.

This is therefore a benchmark event that will help to further Catalonia's positioning in the Internet of Things. The Catalan companies and technology centres that will attend this Congress are the best example of our country's potential for leading economic change in the future, a future in which digital technology and technological advances will play a key role in the development of a new industrial model.

Felip Puig i Godes
